SUMMARY

Passionate and solutions-driven full-stack web developer who recently completed Vanderbilt University's Coding Bootcamp. Strong foundation in various programming languages and an insatiable appetite for learning and growth. Determined and committed to excellence. A quick learner who thrives in fast-paced team environments and is committed to delivering high-quality projects on time. Excited to take my first steps into the web development industry.

PROJECTS

Anime Senpai

Github: <https://github.com/courtneyfarzam/Anime-Senpai>

Live: <https://anime-senpai.herokuapp.com/>

- ❖ A web application that allows users to sign in and save different anime series to their watchlist. Created within a 4 person team.
- ❖ I worked on almost every aspect, but I feel that I helped my team the most with connecting the backend to the frontend. This project gave me such a better understanding of React and the complexities behind full stack development.
- ❖ MongoDB | Express | React | Node.js | GraphQL

Projects continue on the next page...

SKILLS

HTML	CSS/SCSS
JavaScript	React
MongoDB	Express.js
Node.js	GraphQL
MySQL	REST APIs
CRUD	JSON
Algorithms	Wireframing
Git	Github
Kanban	Heroku
Scrum & Agile Principles	

CURRENTLY LEARNING

Next.js

C#

TRANSFERABLE SKILLS

Creative Problem Solving
Multitasking
Interpersonal Skills
Crisis Management
Attention to Detail
Empathy & Respect
Teamwork & Community
Leadership

The Port Resort

Github: <https://github.com/courtneyfarzam/The-Port-Resort>

Live: <https://the-port-resort-728023def23c.herokuapp.com/>

- ❖ A site where users can seamlessly create their own portfolio website for future employers and personal use. Created within a 4 person group.
- ❖ I contributed to both the frontend and backend, however, it was my sole responsibility to create the generated portfolio. I really got to utilize my creativity with this project and further enhance my CSS skills. This was also my first time using a Javascript framework and was a great stepping stone for later learning React.
- ❖ MySQL | Sequelize | Express | Handlebars | Node.js

Real Time Weather

Github: <https://github.com/courtneyfarzam/Real-Time-Weather>

Live: <https://courtneyfarzam.github.io/Real-Time-Weather/>

- ❖ A real-time weather application using the Open Weather API.
- ❖ While this project was to practice using third-party APIs, I learned so much about CSS and creating a beautiful UI. I was able to dive deep into the design of the site, which has now increased my understanding and speed when faced with frontend style issues.
- ❖ HTML | CSS | Javascript

EDUCATION

Vanderbilt University
Coding Bootcamp
Program Certificate

Rhodes College
B.A. Music

WORK EXPERIENCE

J. Alexander's
Jan 2022 - July 2022
Server / Trainer

Porch and Parlor
Nov 2019 - Dec 2021
Server / Trainer / Bartender

Babalu Tacos and Tapas
June 2018 - Nov 2019
Server / Trainer / Bartender

Purple Parrot Co.
May 2016 - Aug 2017
Server / Trainer / Bartender
